

**BOUNTY**  **ZRC DEFI TOKEN**

**BASED**  **ZHCASH** **BLOCKCHAIN**

Version 01 alpha

## BOUNTY REWARD PROGRAM

**BOUNTY token** — is a modern smart master contract with staking based on the P2P blockchain network ZHCash, made in accordance with the De-Fi ZRC-20 standard in a programming language Solidity smart contracts.

**REWARDS**  **PROGRAM**

**BOUNTY**   
**De-Fi Token**

---

**TO PARTICIPATE IN THE STAKING PROGRAM YOU MUST HAVE BOUNTY TOKENS**

This allows us to take full advantage of our blockchain technology to spread the ZHCash idea, scale, protect and monetize intellectual property.

One of the key goals of the bonus program is not only marketing the project, but also creating a strong platform community.

**DeFi Bounty and Airdrop campaigns from 2024** - to reward network participants, for which **3 billion BOUNTY** tokens have been allocated + 7 billion will be generated in the process by participants of the BOUNTY program within 777 days from the launch of the smart contract.

**The maximum possible issue is 10 billion BOUNTY tokens.**  
The issue is closed. Over time, the combustion process will begin.

**BOUNTY smart contract address: 567a0b9c760963fee9eeb46249eafcc52103228d**

The BOUNTY token smart contract is written in the Solidity smart contract programming language and compiled on the compiler version Remix IDE 0.8.4. The code was optimized and tested.

DeFi staking of BOUNTY tokens refers to storing BOUNTY tokens in the program ZHChain network support.

**Staking BOUNTY tokens refers to storing BOUNTY tokens in the ZHCASH wallet.**

**Staking conditions:** Owners of the BOUNTY token increase their stake for storing the token in their personal addresses. The token has a unique property - it generates itself at a speed of 0.55% per day. The condition for crediting is an outgoing or incoming token transaction to a given address.

**Example:** On March 1, you completed useful actions and received 100 BOUNTY tokens. On March 2, I made a transaction of 1 token for myself and 100.55 BOUNTY tokens appeared on my balance. Accordingly, if the transaction is carried out once a month, the balance will increase by 16.5% and will amount to 116.5 BOUNTY tokens. If the transaction is carried out daily - then you can get a compound interest (up to 20%).

**BOUNTY tokens are a grants and rewards program  
the purpose of which is to reward network members for useful actions.**

**Rewards for network members  
for useful actions: popularization,  
advertising, reviews, articles, video creation,  
development, testing, financing**

**BOUNTY reward and grant program of the ZHCASH blockchain platform.**

**REWARDS FOR:** writing articles about ZHChain and Zero Gravity Foundation, creating videos and reviews on a topic (or with a mention or comparison), private financing of fund projects through GRAVY – all GRAVY token holders have the ability to accrue BOUNTY tokens, various advertising, blog reviews, video blogs and various social networks, network validation and forging.

**GRANTS FOR:** development of smart contracts, development and implementation of DeFi protocols and algorithms, development and launch of decentralized systems including liquidity pools, development of Dapps (decentralized applications) and their launch on the ZHChain network, listing of ZHC and derivative assets on markets and exchanges, creation and launch of smart contracts.

**You will find more detailed information about awards and grants  
on the official website or BOUNTY mirrors (see next page).**

In order to send any number of tokens from address to address, you need to pay for the "gas" transaction of the ZHCHAIN NETWORK blockchain network - the ZHC coin. The minimum amount for staking is 1 BOUNTY💎.
